

How to Install and Configure DealerLogic

Dealer Logic has been tested for use with Vista Home Premium and Vista Business. There are a couple of additional settings and configurations that need to be adjusted for an optimal user experience. If you have any problems with the following steps, or are not comfortable changing computer settings, please contact Dealer Logic support and one of our team can walk you through the changes, or remotely access your PC and make the changes for you.

Note: You will need to signed on as a Windows Administrator or know the Windows Administrator's password to perform the following 2 steps.

Install DealerLogic

- 1) Download the Dealer Logic installer from <http://downloads.rvlogic.com>. Choose *Save* not *Run* if prompted. Save the files to your Desktop or to another easy to remember location. When the download has completed, proceed to the next step.
- 2) Double-click the DealerLogicInstaller.msi file that you saved in step 1. Answer the prompts with the default answers. If your computer does not have Microsoft .NET Framework version 2.0 or higher, the installer will prompt you to download. Once the version of .NET has been installed, click on the installer again. When the installation is complete, proceed to Assign Windows User Account rights to the BreezeGo Folder.

Assign Windows User Account's rights to the BreezeGo folder

If you are running Windows XP, this step is not necessary; you can now sign onto DealerLogic. If you are running Windows 7 or Vista, please continue.

- 1) Click on the Start Button
- 2) Click on Computer
- 3) Double-click the (C:) drive. This will open the contents of the drive
- 4) Double-click Program Files
- 5) Right click the BreezeGo folder, choose Properties from the popup menu
- 6) Click the Security tab
- 7) Click the Edit button
- 8) In the 'Group or user names' box, select Administrators
- 9) In the Permissions for Administrators box, if the Allow check box on the Full Control line is not checked, check it, and then click Apply.
- 10) In the 'Group or user names' box, select Users
- 11) In the Permissions for Users box, if the Allow check box on the Full Control line is not checked, check it, click Apply.
- 12) In the 'Group or user names' box, select TrustedInstaller
- 13) In the Permissions for TrustedInstaller box, if the Allow check box on the Full Control line is not checked, check it, click Apply.
- 14) Click OK to close the Permissions window, and then click OK to close the Properties window.
